

The Grow it All Planter

- Instructions for double height unit - 2 metres

1 Take the base unit and unclip the top two securing tabs

4 Gently, but firmly slide the top unit down into the base unit until resistance is felt, when the top unit contacts the top layer of planting cups

The unit is now assembled and can be secured at the top with the fixings supplied.

2 Take the top unit fold out the base flaps and cut the flaps back to half an inch (1 cm) length.

Fold the cut flaps back into the unit

3 Insert the top unit into the base unit.

Make sure that the back seams align to give a symmetrical fit

5 Fill the assembly with compost and plant up using all the planting pockets for a massive display of blooms (Remember to dead head).

We recommend the application of liquid plant food every 10 days and the application of a few slug pellets in the lower planting cups.

As a variation, plant fruit or vegetables in the top section, ie, strawberries, peppers, tomatoes, lettuce, etc. (use about every 3rd planting cup) and plant flowers in the base.

Enjoy!
